

# SENSORS & SAMPLERS

*Examples of drone applications*

# Today's examples

- Standard cameras
- Smart eyes
- Lidar
- Radar

# Standard RGB cameras

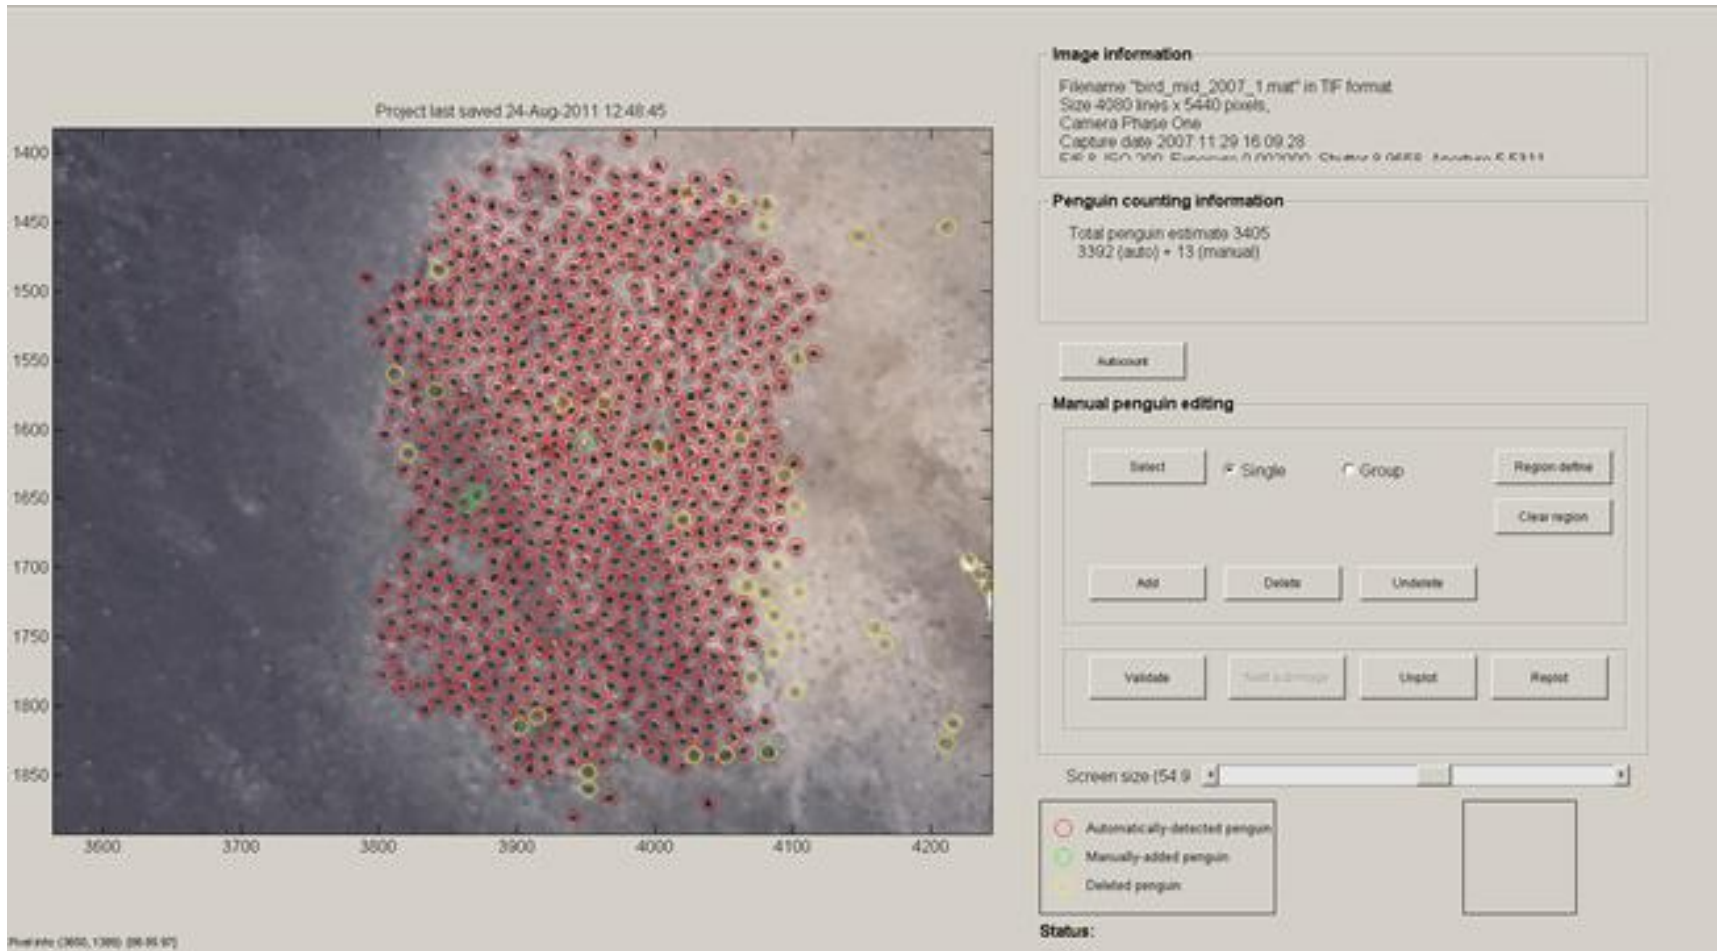

- Standard photography with off the shelf products
- Cameras often included with drones

So what can we do with them?

# umbilical design

# Normalized Difference Vegetation Index

# Smart eyes

Too many plants to classify and investigate in too little time?

# Smart eyes Intelligent Vision System

Two cameras – separation as human eyes (~7 cm)

Built in Artificial Intelligence

Main purpose – offload human inspection

Stereo vision to determine distance

1, 2, 3,....

Papaver laestadianum

Situation based  
navigation

# Lidar

## Light Detection And Ranging

Need for highly accurate  
3D terrain models?

# Lidar Light Detection And Ranging

**RiCOPTER**<sup>®</sup>  
... A RIEGL<sup>®</sup> COMPANY

Laser scanning with 5 mm resolution

# Radar

## Radio Detection And Ranging

Need to create 3D terrain models in harsh weather conditions, cloudy skies or at night time?

# Radar

## Radio Detection And Ranging

- Works in rain, darkness, through clouds
- Provides distance & profile

Application: installed at railway crossings to detect people and vehicles

# SAR

## Synthetic Aperture Radar

### Areas of applications, examples

Land:	Cover, lake levels, soil moisture
Vegetation:	Forest and crop biomass
Ocean:	Currents, oil spill
Sea ice:	Cover, type, thickness
Snow, land ice:	Cover, melting, snow water equivalent

Synthetic length/aperture

# SAR

## Synthetic Aperture Radar

Ongoing research with SAR on a drone platform

X-band: 8-12 GHz  
Resolution: ~ 0.3 m  
Weight: 5 kg

Time: 25 min
